

The Problem:

Virtually all businesses now give their staff Internet access, yet most freely acknowledge that this resource gets widely abused on a daily basis.

Many fail to act because the problem is 'too difficult'. A restrictive, inflexible solution that is high maintenance for IT staff is no answer.

However, the consequences of ignoring this problem are now extremely serious. Current legislation requires all organisations to take proper action to enforce an appropriate Internet Access Policy. Failure to do so means that senior management are potentially liable for the outcome of any breaches that come to light.

WebDefender Enterprise is a best in class web access policy control system for the control and management of employee web access, and is delivered as a Software-as-a-Service (SaaS) solution.

It puts you back in charge of how your Internet resources are used, whether staff are office based or mobile workers.

The Challenge:

Current filtering systems are limited in their ability to solve the problem and leave administrators frustrated.

If they are simple to implement, they don't offer granular policy control and detailed reporting. If they are server or appliance based, they impose an additional overhead that no IT department needs.

Many solutions struggle to manage mobile users and few can control applications other than a web browser. Virtually none are able to adapt dynamically to frequent changing web content as they rely on static block lists.

On top of which, any solution that doesn't integrate with Microsoft Active Directory is simply making unnecessary work for your Admin team.

The Solution:

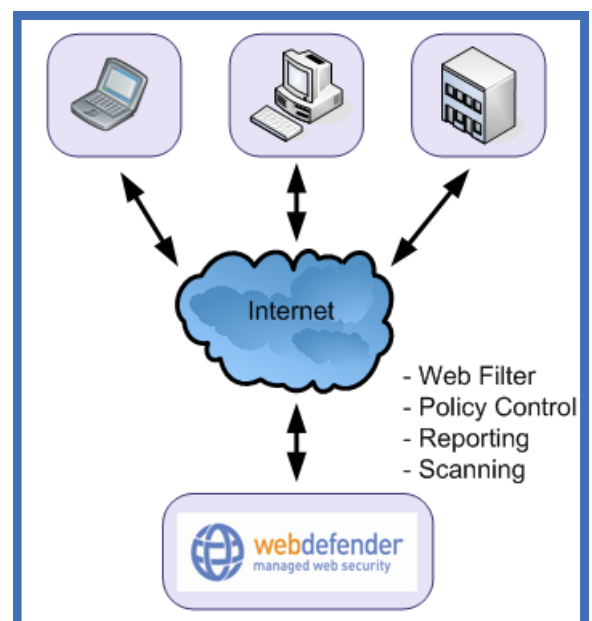

WebDefender Enterprise gives you the control and protection your business needs. It will make sure the Internet is used properly and productively, and that malicious software is removed well away from your network

fully integrated with intY's management portal and Active Directory technologies, WebDefender Enterprise delivers a one-touch implementation and management experience.

WebDefender Mobile option:

Staff accessing the web via 3G are often left completely unmonitored.

Adding WebDefender Mobile option protects against this.

WebDefender Enterprise puts you back in control of your Internet Policy. You can manage all aspects of your Internet Access Policy:-

Define your policy

Over 54 web categories covering over 3 billion URLs. Precise time-of-day controls. Block file sharing, chat & 'problem' applications. Import users and groups from Active Directory.

Enforce the policy

Users get their online behaviour controlled in line with their individual requirements. WebDefender filtering has been approved by Becta and meets BSI PAS:74 2008 Internet Safety Standard.

Report on policy status

Comprehensive reports ensure you know what's going on so you can make appropriate changes if necessary.

Proactive protection for your business

Stop it *before* it happens. WebDefender Enterprise makes sure you avoid:-

- Legal liability issues from staff viewing and downloading illegal or inappropriate material.
- Productivity loss. Prevent Internet performance degrading for employees trying to work due to personal web usage by others.
- Security threats entering your network via web traffic.

Advanced features:

Global, Group and Per-User Filtering– Create Web content filtering policies for an individual user, a group or for a whole company. With full Active Directory synchronisation, moves and changes become quick and simple.

Approved filtering performance

- Becta approved URL filtering.
- Meets BSI PAS:74 2008 Internet Safety Standard

Mobile users– By managing and monitoring the web behaviour of mobile workers wherever they access the Web, you keep your business assets protected and make sure your policy is always enforced.

Application control– Prevent the use of Peer-to-Peer and Instant Messaging applications used to download illegal or infected files. Manage loss of network performance due to excessive non-work use of streaming media applications.

WebDefender lets you define the access rules for the applications your business needs.

Malicious Content scanning- All browser traffic is scanned for malicious software i.e. viruses, spyware, trojans and adware. Any site found to contain these will be blocked.

Active Directory integration—Use your existing Windows user credentials. Simplify day-to-day management of filtering by synchronising with the departmental groups your business already uses.

Dynamic Web categorisation– With a vast number of URLs already categorised WebDefender delivers fast, reliable performance. Unlike old fashioned systems that rely on a static block list, it uses sophisticated metrics to analyse new sites in real time. All the web sites your employees visit will be checked before they see them.

Hosted deployment– WebDefender operates within intY's state-of-the-art infrastructure so you have no servers to install, manage and maintain. Backed by a comprehensive SLA for peace of mind.

Customised, granular reports– Build detailed reports and customise to your exact needs. Schedule runs so you maintain oversight of policy performance. Add the powerful exception reporting facility so you only receive a report when a key event occurs.

WebDefender Mobile– Optional protection for 3G mobile devices.
